Ambient Light Outdoors

BEL LIGHTING

Ambient lighting is one of the most important elements in outdoor lighting design. Unlike functional lighting, which is primarily focused on visibility and safety, ambient light aims to **shape the atmosphere** of a space. It creates **depth**, **softness** and **visual comfort**, allowing outdoor areas to feel **warm**, **inviting** and naturally **connected** to their surroundings.

BEL LIGHTING

In landscape and architectural lighting, ambient light is about **controlling darkness**, highlighting selected elements and creating a balanced **visual experience**. By using low light levels, soft contrasts and carefully positioned luminaires, the outdoor environment becomes more comfortable, elegant and **emotionally engaging**.

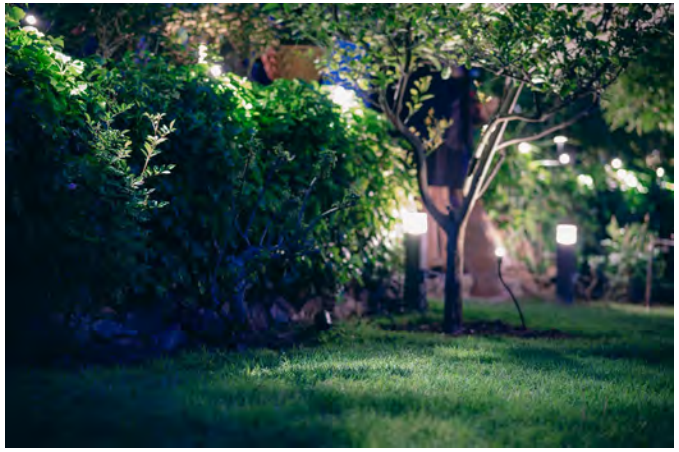

BEL LIGHTING

The purpose of ambient lighting is to **enhance** the way a space is perceived and experienced. It can make a garden feel more **intimate**, a pathway more **welcoming**, a terrace more **relaxing** or an architectural element more **expressive**. When designed properly, ambient light adds character without overpowering the **natural beauty** of the environment.

Several **lighting techniques** can be used to achieve this effect.

Shielded and directional light can create visual interest while reducing glare

Soft **accent** lighting can reveal plants, textures and decorative features

BEL LIGHTING

Grazing can emphasize stone, wood or vertical surfaces

Hidden or integrated luminaires can produce a subtle glow without drawing attention to the fixture itself

Low-level lighting can guide movement discreetly

BEL LIGHTING

The key principle is **balance**. Ambient lighting should **respect** the space, the materials and the night environment. It should provide enough light to create comfort and atmosphere, while maintaining contrast, shadow and visual calmness. Through this approach, outdoor lighting becomes more than a technical solution; it becomes a design tool that transforms the space after sunset.

Sami Series

BEL LIGHTING

Sami

Mini Sami

Sami flex

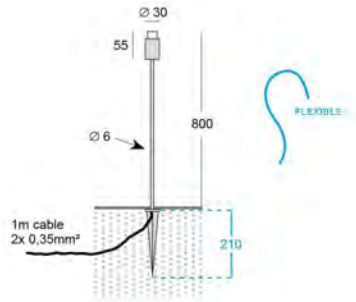

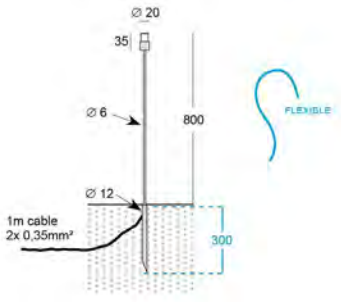

Mini Sami flex

Copper
IP65 – IK06
Sandblasted Plexiglass

1.1W / 3.2W
2200K / 2700K / 3000K
4000K / 5000K

1W
2700K / 3000K / 4000K

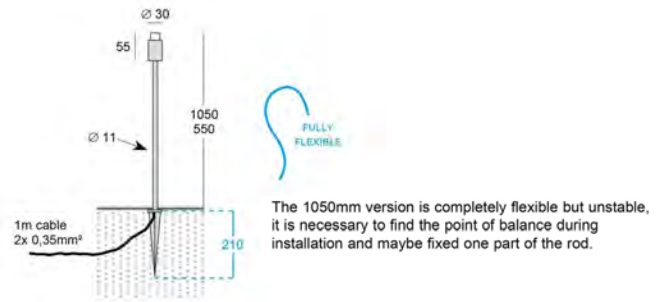

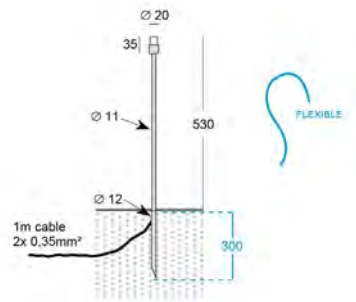

Anodized Aluminum with Flexible Polyolefin Rod
IP65 – IK06
Sandblasted Plexiglass

1.1W / 3.2W
2200K / 2700K / 3000K
4000K / 5000K

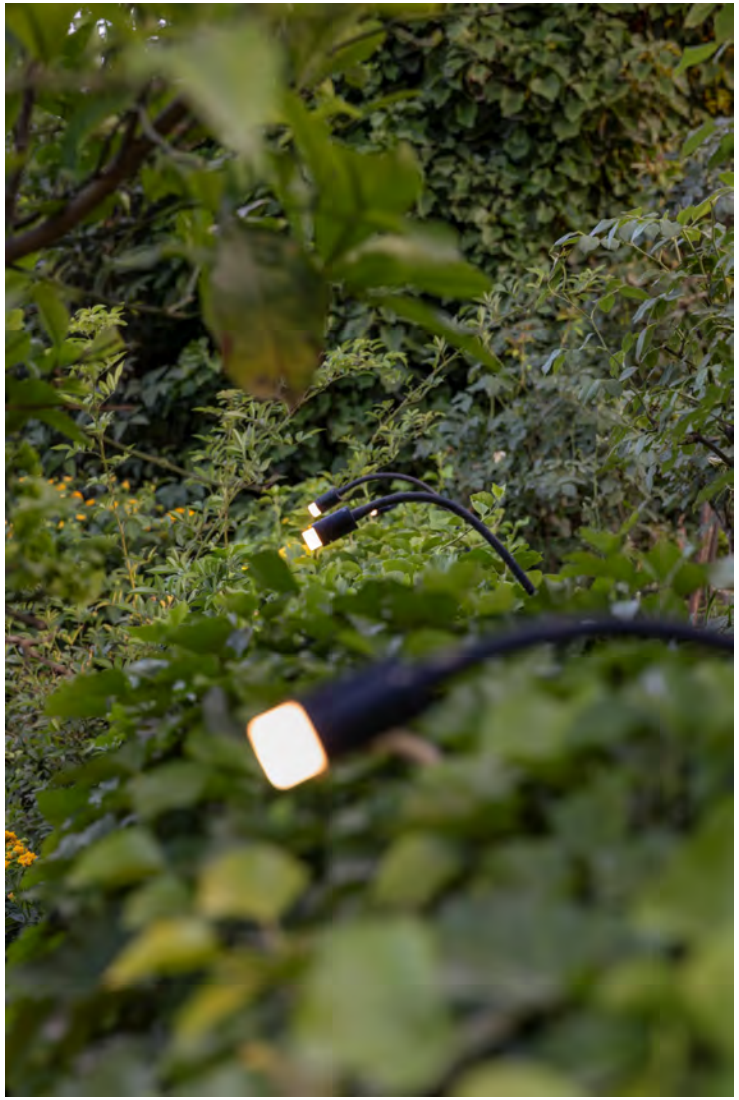

1W
2700K / 3000K / 4000K

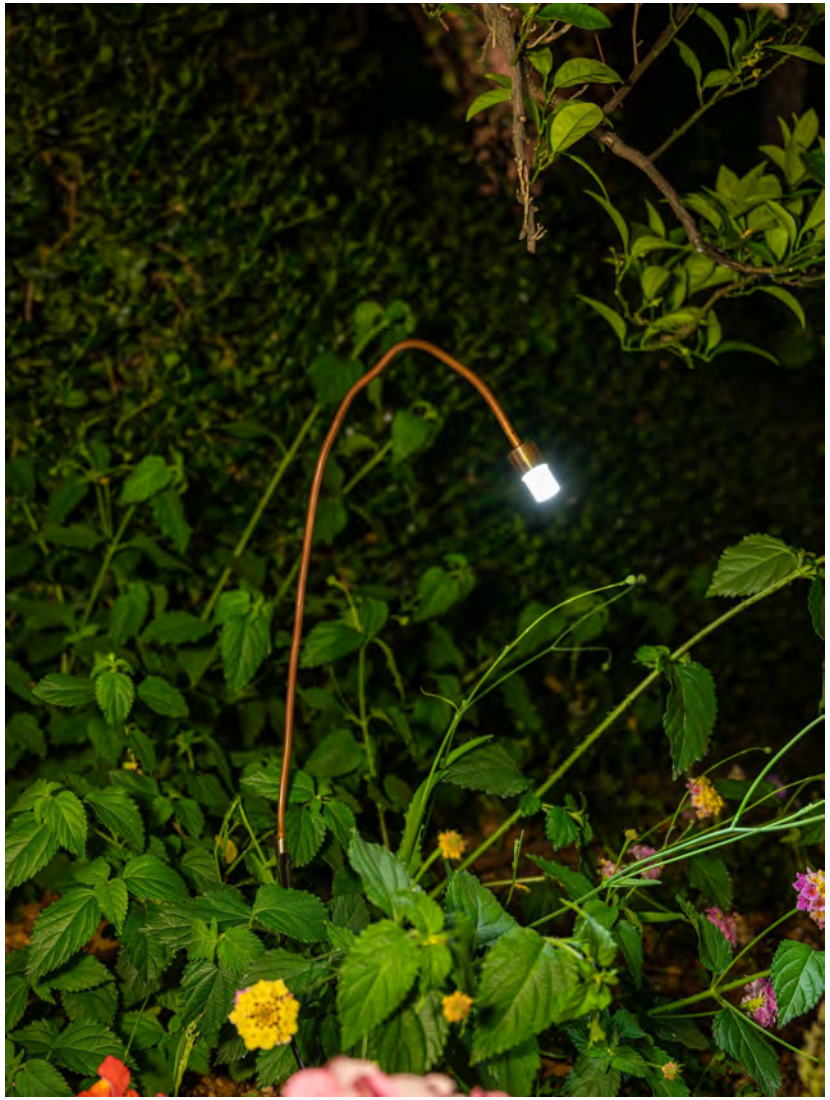

The 1050mm version is completely flexible but unstable, it is necessary to find the point of balance during installation and maybe fixed one part of the rod.

BEL LIGHTING

Anti Glare Snoot
